Library Vision:

Providing high quality library services in the fields of education and scientific research for undergraduate and graduate students and SPU academic staff, with special emphasis on constant work for enriching our resources and electronic services in cooperation with national and international libraries and electronic databases.

Objectives:

- Creating a strong enabling learning environment for SPU students.
- Acquiring up-to-date references and making them available for the university students and teaching staff.
- Providing scientific research papers in all fields for the university and teaching staff and researchers.
- Establishing up-to-date databases services and e-books.
- Updating curricula contents to cope with international standards.
- Communicating and cooperating with national and international libraries.
- Linking the central university library to other local, Arab, and international rivals to enable cross-universities search possibility, provide technical support and prepare a library guidebook.
- Facilitating scientific research process in the Syrian Private University.

The central library strives to provide knowledge and information for students and teaching staff. Its ever-updated holding include books, references, electronic databases, and electronic journals and books in various disciplines. Accordingly, the university has given the library high attention and works steadily to develop it through providing it continuously with new Arabic and English textbooks and references proposed by the academic staff. The library's internal database search engine provides assistance for easy search and retrieval.

Electronic Library: The Electronic Library is technically an alternate library. Its services include:

Offering access to global electronic libraries and databases providing e-Books for teaching staff and students.

Providing copies of the CDs and DVDs attached to the library's electronic books.

Providing the teaching staff and students with audiovisual and digital learning and research content
